

Windows Keyboards and Keyguards

Keyguards for all computer keyboards are available, regardless of make or model.

They reduce frustration and increase speed by increasing accuracy of typing when limited by fine motor accuracy or muscle fatigue.

They allow computer users to avoid unintentional keystrokes when working with software programs.

We have durable clear acrylic keyguards for Apple, IBM, IBM clones, & custom keyboards - laptop and desktop models

For keyguards that are new to us, please mail a xerox copy of the keyboard to us after calling our office for information.
