

A Smarter Vision®

PHOTOELECTRIC TYPE SINGLE STATION/MULTI-STATION SMOKE ALARMS AC POWERED, 120V, 60Hz or 220V, 50Hz

Installation Instructions - Owner's Information

READ CAREFULLY AND SAVE

INTRODUCTION 700 SERIES

The 713 Series smoke alarm is a photoelectric type unit for use as an evacuation device in residential applications, while the 710 and 720 Series are for use as an alert and relocate device. Each smoke alarm has a solid state piezo signal to warn and alert the household to the presence of threatening smoke.

Your photoelectric smoke alarm is designed to detect the smoke that results from an actual fire. Consequently, it is uncommon for household smoke such as cigarette smoke or normal cooking smoke to cause an alarm.

MODELS

(SEE BACK OF SMOKE ALARM FOR EXACT MODEL)

710*	120 VAC, 60Hz
713**	120 VAC, 60Hz with Temporal Horn
720*	220 VAC, 50Hz

* These units produce a non-temporal audible alarm and are therefore not intended for locations where the desired action of the occupant(s) is evacuation.

** Per NFPA 72, the American National Standard Audible Emergency Evacuation Signal as defined in ANSI S3.41, is required whenever the intended response is to evacuate the building.

OPTIONS, SELECTIONS:

- T - Integral 135°F Thermal Sensor
- H - Isolated 135°F Thermal Sensor
- F - 1 Form A/1 Form C Aux. Relay with Tandem Wire Connection
- CS-(W or C) - 1 Form C Aux. Relay Contact and Visual Signaling Strobe Light with Tandem Wire Connection
- CSX - Same as the CS but with an additional wire (grey) provided for the remote activation of the strobe.

NOTE: Loss of electrical input will cause the smoke alarm not to function. For maximum safety you should install both battery operated and AC powered smoke alarms.

HOW YOUR SMOKE ALARM WORKS

The 700 Series smoke alarm operates on the photoelectric light scatter principle. The unit's sensing chamber houses a light source and a light sensor.

The darkened sensing chamber is exposed to the atmosphere and designed to permit optimum smoke entry from any direction while rejecting light from outside the smoke alarm. The light source is an infrared (invisible) LED which pulses every 8 seconds. The light sensor is a photodiode matched to the light frequency of the LED light source.

Under normal conditions, the light generated by the pulsing infrared LED is not seen by the light sensor, as it is positioned out of the direct path of the light beam. When smoke enters the sensing chamber, light from the pulsing LED light source is reflected by the smoke particles onto the photodiode light sensor. At the first sighting of smoke, the device is put into a pre-alarm mode.

This is indicated by a rapidly flashing LED on the face of the smoke alarm.

Once the light sensor confirms smoke for 2 consecutive pulses inside the chamber, the light sensor produces the signal necessary to trigger the alarm and sound electronic horn.

This technique of verifying the smoke condition, combined with a 5-to-1 signal-to-noise ratio, substantially reduces the possibility of nuisance alarms.

HOW TO TELL IF YOUR SMOKE ALARM IS WORKING PROPERLY

- Your smoke alarm is provided with an alarm horn and pulsating Light Emitting (indicator) Diode, which pulses every 15-30 seconds, and a green AC power on LED.
- When turning the test knob on the smoke alarm to Test 1 the red LED will rapidly flash and the horn will sound. If AC power fails, the green LED will turn off.

NOTE: Tandem Interconnect Models.

- When testing one smoke alarm, the device that is activated will flash the red indicator light and sound its alarm horn, all other units will sound the alarm horn with red indicator lights remaining off. The relays will also activate on all units in tandem on models equipped with the relay option.
- The test knob of your smoke alarm simulates actual smoke conditions.

FIRE PROTECTION PLAN: WHAT YOU CAN DO TO MAKE YOUR FAMILY SAFE FROM FIRES

This smoke alarm can quickly alert you to the presence of smoke-it cannot prevent fire. The ultimate responsibility for fire protection rests solely on you.

Installing smoke alarms is just the first step in protecting your family from fires. You also must reduce the chances that fires will start in your home and increase your chances of safely escaping if one does start. To have an effective fire safety program:

- Install smoke alarms properly following the instructions in this manual. Keep your units clean. Test your smoke alarm weekly and repair or replace it when it no longer functions.** As with any electronic product, smoke alarms have a limited life, and devices that don't work cannot protect you.
- Follow safety rules and prevent hazardous situations:**
 - Use smoking materials properly; never smoke in bed.
 - Keep matches and cigarette lighters away from children.
 - Store flammable materials in proper containers and never use them near open flames or sparks.
 - Keep electrical appliances and cords in good working order and do not overload electrical circuits.

- Keep stoves, fireplaces, chimneys, and barbecue grills grease-free and make sure they are properly installed away from combustible materials.
 - Keep portable heaters and open flames such as candles away from combustible materials.
 - Do not allow rubbish to accumulate.
 - Do not leave small children home alone.
- c. Develop a family escape plan and practice it with your entire family, especially small children.**
- Draw and post a floor plan of your home and find two ways to exit from each room. There should be one way to get out of each bedroom without opening the door.
 - Teach children what the smoke alarm signal means, and that they must be prepared to leave the residence by themselves if necessary. Show them how to check to see if doors are hot before opening them, how to stay close to the floor and crawl if necessary, and how to use the alternate exit if the door is hot and should not be opened.
 - Decide on a meeting place a safe distance from your house and make sure that all your children understand that they should go and wait for you if there is a fire.
 - Hold fire drills at least every 6 months to make sure that everyone, even small children, know what to do to escape safely.
- d. Bedroom doors should be closed while sleeping if a smoke alarm is installed in the bedroom.** They act as a barrier against heat and smoke.

WHAT TO DO IF THERE IS A FIRE IN YOUR HOME

If you have prepared family escape plans and practiced them with your family, you have increased their chances of escaping safely. Review the following rules with your children when you have fire drills so everyone will remember them in a real fire emergency. If the alarm should sound:

- Don't panic; stay calm. Your safe escape may depend on thinking clearly and remembering what you have practiced.
- Get out of the house following a planned escape route as quickly as possible. Do not stop to collect anything or to get dressed.
- Open doors carefully only after feeling to see if they are hot. Do not open a door if it is hot; use an alternate escape route.
- Stay close to the floor; smoke and hot gases rise.
- Cover your nose and mouth with a cloth, wet if possible, and take short, shallow breaths.
- Keep doors and windows closed unless you open them to escape.
- Meet at your prearranged meeting place after leaving the house.
- Call the Fire Department as soon as possible from outside your house. Give the address and your name.
- Never re-enter a burning building.

Contact your local Fire Department for more information on making your home safer from fires and about preparing your family's escape plans.

NOTE: Current studies have shown smoke alarms may not awaken all sleeping individuals, and that it is the responsibility of individuals in the household that are capable of assisting others to provide assistance to those who may not be awakened by the alarm sound, or to those who may be incapable of safely evacuating the area unassisted.

WHAT THIS SMOKE ALARM CAN DO

This smoke alarm is designed to sense smoke entering its sensing chamber. It does not sense gas, heat (except for the H or T options), or flames.

When properly located, installed, and maintained, this smoke alarm is designed to provide early warning of developing fires at a reasonable cost. This unit monitors the air and, when it senses smoke, activates its built-in alarm horn. It can provide precious time for you and your family to escape from your residence before a fire spreads. Such an early warning,

however, is possible only if the smoke alarm is located, installed, and maintained as specified in this User's Manual.

NOTE: This smoke alarm is designed for use within single residential living units only; that is, it should be used inside a single-family home or one apartment of a multi-family building. In a multi-family building, the device may not provide early warning for residents if it is placed outside of the residential units, such as on outside porches, in corridors, lobbies, basements, or in other apartments. In multi-family buildings, each residential unit should have smoke alarms to alert the residents of that unit. Units designed to be interconnected should be interconnected within one family residence only; otherwise, nuisance alarms will occur when a smoke alarm in another living unit is tested.

IMPORTANT NOTE: WHAT SMOKE ALARMS CANNOT DO

Smoke alarms will not work without power. Battery-operated smoke alarms will not work without batteries, with dead batteries, or if the batteries are not installed properly. AC powered smoke alarms will not work if their AC power supply is cut off by an electrical fire, an open fuse or circuit breaker, or for any other reason. If you are concerned about the reliability of either the batteries or your AC power supply for any of the above reasons, you should install both battery and AC powered units for maximum safety.

Smoke alarms may not sense fire that starts where smoke cannot reach the units such as in chimneys, in walls, on roofs, or on the other side of closed doors. If bedroom doors are usually closed at night, smoke alarms should be placed in each bedroom as well as in the common hallway between them.

Smoke alarms also may not sense a fire on another level of a residence or building. For example, a second-floor device may not sense a first-floor or basement fire. Therefore, **smoke alarms should be placed on every level of a residence or building.**

The horn in your smoke alarm meets or exceeds current audibility requirements of Underwriters Laboratories. However, **if the device is located outside a bedroom, it may not wake up a sound sleeper**, especially if the bedroom door is closed or only partly open. If the smoke alarm is located on a different level of the residence than the bedroom, it is even less likely to wake up people sleeping in the bedroom. In such cases, the National Fire Protection Association recommends that the smoke alarms be interconnected so that a smoke alarm on any level of the residence will sound an alarm loud enough to awaken sleepers in closed bedrooms. This can be done by installing a fire-detection system, by connecting smoke alarms together, or by using radio frequency transmitters and receivers.

All types of smoke alarm sensors have limitations. No type of device can sense every kind of fire every time. In general, smoke alarms may not always warn you about fires caused by violent explosions, escaping gas, improper storage of flammable materials, or arson.

NOTE: This smoke alarm is not designed to replace special-purpose fire detection and smoke alarm systems necessary to protect persons and property in non-residential buildings such as warehouses, or other large industrial or commercial buildings. It alone is not a suitable substitute for complete fire-detection systems designed to protect individuals in hotels and motels, dormitories, hospitals, or other health and supervisory care and retirement homes. Please refer to NFPA 101, The Life Safety Code, and NFPA 72 for smoke alarm requirements for fire protection in buildings not defined as "households."

Installing smoke alarms may make you eligible for lower insurance rates, but **smoke alarms are not a substitute for insurance.** Home owners and renters should continue to insure their lives and property.

PLACEMENT OF SMOKE ALARMS

THIS EQUIPMENT SHOULD BE INSTALLED IN ACCORDANCE WITH THE NATIONAL FIRE PROTECTION ASSOCIATION'S STANDARD 72 (National Fire Protection Association, Batterymarch Park, Quincy, MA 02269).

For your information, the National Fire Protection Association's Standard 72, reads as follows:

Smoke alarms shall be installed outside of each separate sleeping area in the immediate vicinity of the bedrooms and on each additional story of the family living unit including basements and excluding crawl spaces and unfinished attics. In new construction, a smoke alarm shall be installed in each sleeping room.

Where to Locate the Required Smoke Alarms in Existing Construction. The major threat from fire in a family living unit is at night when everyone is asleep. The principal threat to persons in sleeping areas comes from fires in the remainder of the unit; therefore, a smoke alarm(s) is best located between the bedroom areas and the rest of the unit. In units with only one bedroom area on one floor, the smoke alarms should be located as shown in Figure 1.

Figure 1: A SMOKE ALARM SHOULD BE LOCATED BETWEEN THE SLEEPING AREA AND THE REST OF THE FAMILY LIVING UNIT.

In family living units with more than one bedroom area or with bedrooms on more than one floor, more than one smoke alarm will be needed, as shown in Figure 2.

Figure 2: IN FAMILY LIVING UNITS WITH MORE THAN ONE SLEEPING AREA, A SMOKE ALARM SHOULD BE PROVIDED TO PROTECT EACH SLEEPING AREA (IN ADDITION, FIGURE 2 SHOWS REQUIRED UNITS IN EACH BEDROOM FOR NEW CONSTRUCTION).

In addition to smoke alarms outside of the sleeping areas, NFPA 72 requires the installation of a device on each additional story of the family living unit, including the basement. These installations are shown in Figure 3. The living area smoke alarms should be installed in the living room or near the stairway to the upper level, or in both locations. The basement smoke alarm should be installed in close proximity to the stairway leading to the floor above. When installed on an open joisted ceiling, the unit should be placed on the bottom of the joists. The smoke alarm should be positioned relative to the stairway so as to intercept smoke coming from a fire in the basement before the smoke enters the stairway.

Figure 3: A SMOKE ALARM SHOULD BE LOCATED ON EACH STORY.

Where to Locate the Required Smoke Alarms in New Construction. All of the smoke alarms specified for existing construction are required, and, in addition, a smoke alarm is required in each bedroom.

Are More Smoke Alarms Desirable? The required number of smoke alarms may not provide reliable early warning protection for those areas separated by a door from the areas protected by the required smoke alarms. For this reason, it is recommended that the householder consider the use of additional smoke alarms for those areas for increased protection. The additional areas include: basement, bedrooms, dining room, near furnace room, utility room and hallways not protected by the required smoke alarms. The installation of units in kitchens, attics (finished or unfinished), or garages is not normally recommended, as these locations occasionally experience conditions that can result in improper operation.

IMPORTANT CONSIDERATION

We recommend replacing your smoke alarm(s) every ten (10) years; why:

- Dust, dirt, and other environmental contaminants can affect your smoke alarm over a prolonged period.
- Fast changing industry consensus standards and codes on all alarms make it advisable to periodically upgrade your smoke alarm to maximize life safety.
- Assurance that your smoke alarm needs are kept abreast with the constantly improving electronic technology.
- Smoke alarms are recognized as one of the lowest cost ways to protect dwelling inhabitants against the danger of fire(s). It makes good common sense to periodically replace and update your smoke alarm that contributes so much to life safety.

MOUNTING LOCATION

This smoke alarm can be mounted on a ceiling or wall with equal efficiency in either location.

- Ceiling location-smoke alarm should be mounted as close as possible to the center of a hallway or room. If this is not possible, the edge of the unit should be at least 4 inches from any wall.
- Wall location-locate the top of the smoke alarm at least 4 inches and not more than 12 inches from the ceiling.

Figure 4: RECOMMENDED SMOKE ALARM MOUNTING LOCATIONS

Figure 5: RECOMMENDED SMOKE ALARM LOCATION IN ROOMS WITH SLOPED, GABLED, OR PEAKED CEILINGS.

The placement of the smoke alarm is critical if maximum speed of fire detection is desired. Thus, a logical location for a smoke alarm is the center of the ceiling. At this location, the device is closest to all areas of the room.

WHERE SMOKE ALARMS SHOULD BE PUT IN MOBILE HOMES

In mobile homes built after about 1978 that were designed and insulated to be energy-efficient, smoke alarms should be installed as described in the section above. In older mobile homes that have little or no insulation compared to today's standards, uninsulated metal outside walls and roofs can transfer heat and cold from outdoors, making the air right next to them hotter or colder than the rest of the inside air. These layers of hotter or colder air can prevent smoke from reaching a smoke alarm. Therefore, put smoke alarms in such units only on inside walls, between 4 and 12 inches (10 and 30 cm) from the ceiling. If you are not sure about the insulation level in your mobile home, or if you notice that the walls or ceiling are unusually hot or cold, install the smoke alarm on an inside wall.

Minimum protection requires one smoke alarm as close to the sleeping area as possible. For better protection, put one smoke alarm in each room, but first read the "Locations to Avoid."

LOCATIONS TO AVOID

Nuisance alarms are caused by placing smoke alarms where they will not operate properly. To avoid nuisance alarms, **do not place smoke alarms:**

- **In or near areas where combustion particles are normally present** such as **kitchens**; in **garages** where there are particles of combustion in vehicle exhausts; **near furnaces, hot water heaters, or gas space heaters**. Install units at least 20 feet (6 meters) away from kitchens and other areas where combustion particles are normally present.
- **In air streams passing by kitchens.** Figure 6 shows how a smoke alarm can be exposed to combustion particles in normal air movement paths, and how to correct this situation.

Figure 6

- **In damp or very humid areas**, or next to bathrooms with showers. The moisture in humid air can enter the sensing chamber as water vapor, then cool and condense into droplets that cause a nuisance alarm. **Install smoke alarms at least 10 feet (3 meters) away from bathrooms.**
- **In very cold or very hot environments, or in unheated buildings or outdoor rooms**, where the temperature can go below or above the operating range of the smoke alarm. Temperature limits for proper operation are 40° to 100°F (4.4° to 37.8°C).
- **In very dusty or dirty areas.** Dust and dirt can build up on the smoke alarm's sensing chamber and can make it overly sensitive, or block openings to the sensing chamber and keep the device from sensing smoke.
- **Near fresh air inlets or returns or excessively drafty areas.** Air conditioners, heaters, fans, and fresh air intakes and returns can drive smoke away from smoke alarms, making the devices less effective.
- **In dead air spaces at the top of a peaked roof or in the corners between ceilings and walls.** Dead air may prevent smoke from reaching a smoke alarm. See Figures 4 and 5 for recommended mounting locations.
- **In insect-infested areas.** If insects enter a smoke alarm's sensing chamber, they may cause a nuisance alarm. **Get rid of the bugs before installing units where bugs are a problem.**
- **Near fluorescent light fixtures.** Electrical "noise" from nearby fluorescent light fixtures may cause a nuisance alarm. **Install smoke alarms and fluorescent lights on separate electrical circuits.**

WARNING: Never disconnect an AC smoke alarm to silence the nuisance alarm. Open a window or fan the air around the unit to remove the smoke. The smoke alarm will automatically turn off when the smoke in the air is completely gone. Do not stand close to the unit. The sound produced by the device is loud because it is designed to awaken you in an emergency. Prolonged exposure to the horn at a close distance may be harmful to your hearing.

INSTALLATION 700 SERIES

Caution: New Construction: DO NOT attach smoke alarm head until AFTER sanding, painting and other dust creating situations are finished and cleaned up.

WIRING/GENERAL

1. Use U.L. Listed cable with Class 1 insulation.
 2. Observe local code requirements. Use box connector to anchor cable to outlet box.
 3. Metal outlet boxes must be grounded to earth ground.
- CAUTION:** Turn off electricity to prevent SHOCK and damage to smoke alarm. Be sure the power line to the smoke alarms is not controlled by any on/off switch, or other type of switch, other than a fuse or circuit breaker.
- IMPORTANT:** Insure that all fluorescent lighting fixtures are properly grounded.
- WARNING:** Smoke alarm installation must conform to the electrical codes in your area and to Article 760 of the U.S. National Electrical Code. Wire installation should be performed only by a licensed electrician.

MOUNTING OUTLET BOX

Use a 2" x 3" switch box or a 4" square or octagon junction box. Mount a box for each smoke alarm. If wall mounting is desired, be sure the box screws are oriented to upper right and lower left corners. Be sure to use supplied Mounting Plate.

NOTE: For trouble areas where there can be a large volume of air blowing out through the electrical junction box. You must first attach an adhesive backed foam gasket, which has been packaged with your smoke alarm, to the back side of the mounting bracket before its secured to the junction box.

WIRING ONE SMOKE ALARM

1. Run a minimum of 16 gauge, 2-conductor cable, plus ground (3 wires) to the junction box from a power supply. Smoke alarms should be run on their own dedicated circuit. Use UL Listed Class 1 wire.

NOTE: The wiring to be used shall be in accordance with the provisions of Article 210 of the National Electrical Code, ANSI/NFPA70.

2. Make wire connections to the supplied plug-in connector as follows: black to black, white to white, and connect the ground wire to the metal outlet box.

NOTE/RED-YELLOW WIRE: The red-yellow wire from the smoke alarm is for tandem connection only. DO NOT USE, AND DO NOT REMOVE INSULATION CAP UNLESS CONNECTING ANOTHER SMOKE ALARM.

710/713 CS/CSX Wiring

WIRING TWO OR MORE SMOKE ALARMS

Tandem Installation

CAUTION: All smoke alarms in a tandem installation must be controlled by the same fuse or circuit breaker. Otherwise tandem units will not operate.

LIMITATIONS: A maximum of 12 smoke alarms ("710/713" or "720") may be connected together. Do not exceed 125 feet between each smoke alarm. Do not exceed 1125 feet between first and last smoke alarm.

NOTE: A maximum of six (6) smoke alarms of either model 710/713 or 720 with the relay options (F, HF, TF, CS, CSX) may be tandem interconnected.

Wire used for interconnecting shall be in accordance with article 760 of the latest edition of the National Electrical Code (NFPA 70) and must not exceed a resistance of 10 ohms.

- Run a minimum of 16 gauge, 3-conductor cable, plus ground (4 wires) to the first junction box from a power supply and between all smoke alarms that are to be connected together. Use U.L. Listed Class 1 wire.
- Make wire connections to the supplied plug-in connector as follows: black to black, white to white, 3rd conductor to the red/yellow wire. The red/yellow wire should be stripped to make the connection. Connect ground wire between metal outlet boxes.

NOTES ON TANDEM INTERCONNECTING MODELS

- DO NOT** connect Gentex Smoke Alarms to other manufacturers' smoke alarms.
- No more than 12 Gentex models 710/713 or 720 Series may be connected in tandem.
- No more than 6 Gentex models with relay options (710F, HF, TF, CS, CSX)/(713F, HF, TF, CS, CSX) or 720F Series may be connected in tandem.
- All units connected in tandem **MUST** get their power from the same circuit, that is, all smoke alarms in tandem must be controlled by the same fuse or circuit breaker.

- After installation to verify proper working conditions all horns must sound in this system.

IMPORTANT WARNING:

Failure to observe any of the conditions set forth may cause system malfunction and damage to the smoke alarm.

MOUNTING: PLATE & SMOKE ALARM

- Lace the connector through the provided mounting plate and secure the plate to the junction box so that the smoke alarm snap-in tabs are in the vertical position if wall mounted. **NOTE:** Mounting plate is marked "THIS SIDE OUT" and slotted for proper positioning.
- Plug the wire connector into the smoke alarm base.

- Place smoke alarm up to the mounting plate, rotating it clockwise until smoke alarm firmly locks into place. Keep the smoke alarm parallel to mounting plate so upper and lower tabs on plate seat correctly into smoke alarm.

CHECKOUT & TROUBLESHOOTING

- Turn test knob to the **NORMAL** position and supply house power to smoke alarm. The red indicator light should flash every 15-30 seconds, showing that smoke alarm is operating properly.
- If red light is not flashing or the green LED is not on:
 - Check the house current.
 - Check connector plug and wire connections. **NOTE:** Be sure power is turned off before checking wire connections.
 - If power supply and wiring check out, but red light does not flash, return smoke alarm to manufacturer. See **TO RETURN A SMOKE ALARM.**
 - When powering up smoke alarms in a tandem installation and all smoke alarms sound immediately, inspect all smoke alarms for those with an illuminated indicator light. These will be the trouble units.
- Testing with the Test Knob:
 - Rotate test knob counter-clockwise to **TEST 1** position and wait up to 20 seconds for smoke alarm to sound. If smoke alarm does not sound after 20 seconds, return smoke alarm for service.
 - After successfully testing smoke alarm, return test knob to **NORMAL** (non-test) position and wait 20 seconds for the smoke alarm to stop sounding.

- To test smoke alarm for high sensitivity, turn test knob clockwise to **TEST 2** position. Alarm should remain silent.
- Make sure to return test knob back to its normal position.
- If your alarm sounds during this test it means the unit's sensitivity has become too high and may cause false alarms.

- f. This could mean your smoke alarm is dirty and should be cleaned as described in the maintenance procedure below.
- g. If the smoke alarm continues to alarm, for TEST 2 position following cleaning, return it to Gentex for service.
- h. To check for proper smoke entry into your smoke alarm's sensing chamber, Gentex recommends using the Home Safeguard Smoke Alarm spray.
- i. This test should be performed once a year and should be sprayed from a distance no closer than 12 inches from the smoke alarm.

MAINTENANCE

After your smoke alarm has been in operation for a period of time or if it was installed prior to the completion of all building construction, your device may have become more sensitive due to dirt build-up in the smoke alarm's optic sensing chamber which could cause nuisance alarms or could cause activation from small amounts of smoke build-up.

If this should occur, following this simple washing procedure will restore your smoke alarm back to its original condition.

For further information, regarding frequency of cleaning and testing, refer to NFPA 72, NFPA, Batterymarch Park, Quincy, MA 02269.

IMPORTANT: Failure to follow full cleaning instructions could result in damage to this smoke alarm. DO NOT remove all smoke alarms at the same time for cleaning.

1. Turn off electrical power to smoke alarm.
2. Rotate the smoke alarm counter-clockwise to remove it from its mounting plate.
3. Unplug the connector from the back of the smoke alarm. Do not remove the wire connection; leave the connection for your replacement smoke alarm or jumper plug.
4. Select three (3) standard size wash buckets and fill them each with one gallon of normal tap water (**distilled or de-ionized treated water is recommended as a final rinse if water is extremely hard in your area**).
5. Add 1/8 cup of Ivory dishwashing liquid to the first bucket of water and allow it to mix thoroughly, then place one dirty smoke alarm into the soap water mixture until it becomes completely covered or submerged. NOTE: If the units are exceptionally dirty, you may wish to first wipe off any excess dirt before washing unit so as not to dirty the wash water too quickly.

DO NOT open smoke alarm for cleaning. IF SMOKE ALARM IS OPENED DURING CLEANING, PRODUCT WARRANTY BECOMES VOID.

WARNING: ONLY IVORY DISHWASHING LIQUID IS TO BE USED. OTHER BRANDS ARE NOT RECOMMENDED AND MAY CAUSE YOUR SMOKE ALARM TO MALFUNCTION.

6. Allow smoke alarm to soak for approximately 10 minutes (longer if extremely dirty). Then agitate for 5 or 10 seconds to flush out any remaining dirt left inside unit's housing.
7. Remove smoke alarm from wash water and transfer directly to one of the first rinse buckets containing clear water. Again, allow smoke alarm to become completely submerged, agitate once more for 5 or 10 seconds to remove soap residue.

8. Finally, transfer smoke alarm to your second and final rinse bucket, repeating method found in Step 7, then remove smoke alarm to a clean dry area for a period of 48 hours to allow it to thoroughly dry.

IMPORTANT: IT IS RECOMMENDED TO CHANGE WASH AND RINSE WATER AFTER FIVE (5) SMOKE ALARMS. IF YOUR SMOKE ALARMS ARE EXTREMELY DIRTY, WATER SHOULD BE CHANGED MORE FREQUENTLY.

WARNING: SMOKE ALARMS ARE TO BE AIR DRIED ONLY. DO NOT PLACE SMOKE ALARM IN OVEN, MICROWAVE OR USE A HOT AIR BLOWER TO ACCELERATE DRYING TIME. THIS COULD RESULT IN DAMAGE TO YOUR DEVICE.

In the event you experience difficulty in the cleaning of your smoke alarm or if you have any questions, please contact Gentex Corporation or your local Gentex distributor.

WARNING

If the smoke alarm does not work properly, do not try and fix it yourself. This will void your warranty. See "To Return a Smoke Alarm" for instructions to return smoke alarms that do not operate properly. **DO NOT TRY TO FIX IT YOURSELF.**

IMPORTANT: Gentex recommends smoke alarms be tested a minimum of once a week.

WARNING: Never use an open flame of any kind to test your smoke alarm. You may ignite and damage the smoke alarm as well as your home. The test feature of your smoke alarm accurately simulates smoke conditions and test the smoke alarm's functions as required by Underwriters Laboratories.

WARNING: Do not cover, tape, or otherwise block the openings of your smoke alarm. These openings are designed to allow air to pass through your smoke alarm, thus sampling the air around the smoke alarm.

WARNING: Smoke alarms are not to be used with detector guards unless the combination has been evaluated and found suitable for that purpose.

FAILURE TO REGULARLY CLEAN THIS SMOKE ALARM WILL RESULT IN FALSE ALARMS. A BUILD UP OF DUST CREATES AN OBSCURATION THAT SIMULATES SMOKE. THIS MEANS THE UNIT WILL GO INTO ALARM WITHOUT A FIRE CONDITION.

TO RETURN A SMOKE ALARM

Should you experience problems with your smoke alarm, proceed as follows:

1. Turn off electrical power to the smoke alarm.
2. Rotate the smoke alarm counter-clockwise to remove it from its mounting plate.
3. Unplug the connector from the back of the smoke alarm. Do not remove the wire connection; leave the connector for your replacement smoke alarm.
4. Carefully pack (the manufacturer cannot be responsible for consequential damage) and return to the manufacturer. Include complete details as to exact nature of difficulties being experienced and date of installation.
5. Return to: Gentex Corporation, 10985 Chicago Drive, Zeeland, Michigan 49464. Prior to returning, call Gentex at 1-800-436-8391 or e-mail FP_RMA@gentex.com to obtain a RMA Number from our return department.

LIMITED WARRANTY

For a period of 12 months from the date of purchase, or a maximum of 18 months from the date of manufacture, Gentex warrants to you, the original consumer purchaser, that your Smoke Alarm will be free from defects in workmanship, materials, and construction under normal use and service. If a defect in workmanship, materials, or construction should cause your Smoke Alarm to become inoperable within the warranty period, Gentex will repair your Smoke Alarm or furnish you with a new or rebuilt replacement Smoke Alarm without charge to you except for postage required to return the Smoke Alarm to us. Your repaired or replacement Smoke Alarm will be returned to you free of charge and it will be covered under this warranty for the balance of the warranty period.

This warranty is void if our inspection of your Smoke Alarm shows that the damage or failure was caused by abuse, misuse, abnormal usage, faulty installation, improper maintenance, or repairs other than those performed by us.

ANY WARRANTIES IMPLIED UNDER ANY STATE LAW, INCLUDING IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, APPLY ONLY FOR THE WARRANTY PERIOD SPECIFIED ABOVE. PLEASE NOTE THAT SOME STATES DO NOT ALLOW LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY LASTS, SO THE ABOVE EXCLUSION MAY

NOT APPLY TO YOU.

GENTEX WILL NOT BE LIABLE FOR ANY LOSS, DAMAGE, INCIDENTAL OR CONSEQUENTIAL DAMAGES OF ANY KIND ARISING IN CONNECTION WITH THE SALE, USE, OR REPAIR OF THIS SMOKE ALARM. PLEASE NOTE THAT SOME STATES DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE EXCLUSION MAY NOT APPLY TO YOU.

If a defect in workmanship, materials, or construction should cause your Smoke Alarm to become inoperable within the warranty period, you must return the Smoke Alarm to Gentex postage prepaid. You must also pack the Smoke Alarm to minimize the risk of it being damaged in transit. You must also enclose a return address. Smoke Alarms returned for warranty service should be sent to: Gentex Corporation, 10985 Chicago Drive, Zeeland, MI 49464.

If we receive a Smoke Alarm in a damaged condition as the result of shipping, we will notify you and you must file a claim with the Shipper. **THIS LIMITED WARRANTY GIVES YOU SPECIFIC LEGAL RIGHTS. YOU MAY ALSO HAVE OTHER RIGHTS WHICH VARY FROM STATE TO STATE.**
