

2-Line Amplified Business Speakerphone

Shown to make even difficult speech sounds more understandable

Model ST250 is a sophisticated 2-line amplified business speakerphone that can digitally adjust frequency-specific volume levels so that any user, especially those working in extremely noisy environments, can comfortably and clearly hear a caller's voice. It boasts highly flexible sound settings: incoming voices may be amplified by up to 52 dB with extra amplification for high frequencies. This level of amplification has been tuned to more effectively restore the perception of many phonemic distinctions common in speech than competing models. Your colleagues won't know you have hearing loss. This phone looks exactly like a normal business phone, when you increase volume it adds frequency-specific amplification automatically.

The internal acoustic chamber also restores low-frequency components in the incoming voice signal, allowing the speakerphone to deliver a crisp acoustic experience one would have only expected from a high-end conference speakerphone.

The huge 7.4 square inch display allows a user to read the screen comfortably even from a distance. This phone also features a quick and easy way for busy user to stay in touch – even out of the office. With a touch of a button, incoming calls can be set to be forwarded to a mobile phone (needs call forwarding service).

Telephone Features

- **Conference grade speakerphone, up to 83 dB SPL at 500mm (~20 inches).**
- **Up to 52 dB amplification at 120 dB SPL**
- Frequency-specific amplification for both handset and headset.
